

Supplemental Figure S1. Species-level changes in F_V/F_M recorded in leaves exposed to different temperature treatments (see text). In each panel, points indicate values for individual leaves, thin red lines indicate individual model fits; the black line indicates the median fit, thick red lines indicate 95% Confidence Interval of model fits, and the vertical line indicates T_{50} (i.e., the temperature at which F_V/F_M reaches 50% of the control value).

Coccoloba padiformis - Puerto Triunfo

Pouteria sp5 - Puerto Triunfo

Oxandra sp2 - Puerto Triunfo

Coccoloba ascendens - Puerto Triunfo

Licaria sp3 - Puerto Triunfo

Brosimum alcastrum - Puerto Triunfo

Rinorea hirsuta - Puerto Triunfo

Brownea rosa-de-monte - Puerto Triunfo

Swartzia simplex - Puerto Triunfo

Jacaranda hesperia - Puerto Triunfo

Ampelocera cf. longissima - Puerto Triunfo

Talisia sp2 - Puerto Triunfo

Pachira sp2 - Puerto Triunfo

Licania sp5 - Puerto Triunfo

Garcinia intermedia - Tamesis

Machaerium biovulatum - Tamesis

Dalbergia sp2 - Tamesis

Cordia panamensis - Tamesis
